Gateway

The market challenge

Alternatives market participants face the daunting task of understanding performance and risk exposure across their entire portfolio of investments. They receive data from multiple sources, in multiple formats, with few marketplace standards or best practice rulesets to govern data extraction. Collecting, digitizing, and acting on insights from this valuable, but unstructured data is job number one for every front-office team.

Gateway gives your team a single view of your entire portfolio and seamlessly integrates a workflow experience with your existing systems. By combining formerly disparate datasets with our market-leading Digitize product line, analysts and portfolio managers can spend less time mapping data and more time confidently analyzing portfolio trends.

How Gateway transforms your business

- Gateway creates a holistic view of your global dataset, enabling analysis at multiple levels and rapid decision-making with structured, reliable data.
- Fine-tuned to your target operating model, our system integration services allow connections directly to your current tech stack, monitoring, and reporting systems.
- Our managed data services enable your front-office teams to spend their time on high-value activities.
- Gateway workflow support and integrated front-office data approvals capabilities ensure accuracy and quality.
- Portfolio monitoring includes dashboards configured directly for your needs and automated data population within the Gateway solution.

Make data work for you

- A comprehensive document repository with original source files and relevant metadata to support compliance and internal access needs.
- Unstructured data is digitized, interpreted, reconciled, and verified based on predefined client-specific preferences
- Our service teams create a comprehensive data catalog across multiple documents and content sets to provide a unified view of the portfolio.
- Access leading portfolio monitoring platforms with drill-down capabilities, aggregated risk and performance metrics, cash-flow forecasting and liquidity analysis z
- Front office workflow and approvals engine allows users to receive relevant documents, approve and supplement data for new investments and funds, and monitor portfolios.
- Transition to a streamlined, data-consistent operating model by leveraging our system integration services to connect directly to existing middle- and back-office systems
